DETAILED ACTION

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the "pn junction region . . . formed between photodiodes" is not clear. A pn junction is an interface between a p region and an n region. It is not really itself a separate region. Does this claim mean that a *region* is formed between photodiodes, where such region would have a pn junction (with the substrate, perhaps). Of course, any photodiode itself would have a pn-junction, which would lie between adjacent photodiodes, where more than one are formed adjacent one another. So does the claim mean that a separate region must be formed between the photodiodes (such as 13 in figure 2, for example), or does the claim mean merely that photodiodes are formed adjacent one another, separated by their own pn junctions?
